

Pre-Engineered Metal Building Solutions

Building with the best

is the philosophy that convinced us to team up with Nucor Building Systems (NBS), North America's leading manufacturer of pre-engineered metal building systems.

Together, we deliver complete, 'worry-free' metal building solutions.

Armour Steel has provided custom structural steel fabrications for pre-eng metal buildings for years. Now, as an authorized builder for NBS, we supply innovative total building solutions for

- Structural Steel Framing Systems
- Cold Formed Sheet Steel Roof Panels
- Cold Formed Steel Wall Panel Systems
- Accessories: Mezzanines, Doors, Canopies, etc.

One Source

Armour delivers a complete metal building package that 'fits up' in the field – and against your budget – the way it's supposed to.

We review your specs, looking for opportunities to enhance value or reduce cost, then select the optimum components from NBS' extensive catalog. The building design is analyzed as a system against loading information plus pertinent code requirements, and is certified by a professional engineer in compliance with the Metal Building Manufacturing Association, CAN/CSA A660 and CWB W47.1 standards.

We even supply the rebar and wire mesh for your foundations, plus any custom fabrications for stairs, mezzanines, canopies and architectural details.

When the metal building package arrives, we'll even look after erection. It's all part of our One Source customer-centered philosophy.

Metal Buildings = Outstanding Value

Pre-eng metal buildings can be the ideal solution when a rigid 'shell' structure is called for. They're affordable, fast to erect, and easy to expand later on. Metal buildings are popular for

- Retail and Strip Mall
- Agricultural and Storage
- Manufacturing/Industrial
- Churches and Educational
- Warehouse and Distribution
- Sports Complex/Field House

And today's metal building systems aren't only affordable, they're also attractive. A wide array of finishes and architectural features can give metal buildings an aesthetic advantage that adds value.

Get the Armour Steel Advantage

Complete Responsibility It's simple - one project manager, one phone number - to handle the metal building package, custom structural steel components, rebar, mesh, cold formed steel framing and those steel "odds and ends" that any building project entails.

Secure Supply based on NBS' industry-leading position, its full IAS AC472 accreditation, plus Armour's longstanding supplier relationships and our intense focus on quality.

Accountable Performance for on-time delivery, for putting only trained, capable personnel on your job, and for responding quickly and professionally to your requests.
